

## **Waste Management Sub-committee report February 2015**

Nothing of major significance to report since last meeting, updates from council on waste management issues are:

- *Skips on wharves-* Although PWC had said this would be complete in January there have been further delays with the contractor- unable to get a new definite date for the replacement.
- *Next round of contract for waste removal-* although it's some way off, PWC have asked SIRA for input on any issues/suggestions that would inform the next contract.
- *Proposed changes to the green and general waste removal-* PWC looking at options for changes to the frequency and mode of the clean-ups. Concerns about potential for further weed distribution caused by the transport of weeds in open containers have been added to PWC consideration.
- *Community issues-* PWC asked to be update on any waste issues reported to SIRA- this month that has included the continuing use of skips for building material disposal and delays in removal
