

DRAFT WASTEWATER SURVEY
(For Survey Monkey)

Background

Sydney Water has said that a sewerage system was offered to Scotland Island many years ago, but the community was unsure so the project did not go ahead. We need to be clear about what the significant majority of our community want.

At our recent AGM Ron Barrelle described Dangar Island's experience of the replacement of their individual septic systems with a mains sewerage system. The technology used on Dangar would be the same for Scotland Island. This is a small pipe pressure system (approx. 50 mm, buried 750mm underground) with a macerator pump installed at each property.

On Dangar Island the sewerage system brought considerable environmental benefit, health risk reduction and significantly decreased mosquitoes. Residents connected over a one-year period for the cost to upgrade and hook up their home plumbing to the system.

(NOTE: this needs to be verified)

More background information can be found [here](#) and [here](#)....

Survey Question

Do you support a sewerage system for Scotland Island if the only cost* is for a local plumber to connect your household plumbing system to the Sydney Water System?

Y/N

*on Dangar Island the average cost of doing this was \$3000 **(NOTE: this needs to be verified)**
